

SOUNDVISION™

Soundvision screens are the world's brightest front projection screen, with 360° surface sound technology. The only projection screen, where the screen surface is the speaker. When brightness, clarity and contrast are an important part of your visual presentation, there's only one solution to use. This specially designed optical screen has an aluminium coated surface which is highly reflective. The surface area of the screen is turned into a speaker creating the ultimate visual display system. Soundvision screens provide a cost effective solution to big screen advertising and entertainment.

Pro Display's Soundvision Screens are available in both 10 and 20 Gain formats.
